- protein domain specific binding -
- transmembrane transporter binding
 - calmodulin binding
- 1-phosphatidylinositol-4-phosphate 5-kinase activity
 - cell adhesion molecule binding
 - ubiquitin protein ligase binding
 - protein kinase binding
 - calcium ion binding
 - identical protein binding
 - calcium-dependent phospholipid binding
 - GTPase activator activity
 - insulin-like growth factor receptor binding
 - transmembrane-ephrin receptor activity
 - protein heterodimerization activity -
 - **ATP** binding
 - protein binding
 - amine binding
- vity, acting on paired donors, with incorporation or reduction of molecular oxygen, NAD(P)H as one donor, and incorporation of one atom of oxygen
 - scaffold protein binding
 - gated channel activity -
